EXPERIMENT

Title

SOLVE THE EQUATION

Description %

Given an integer N, your task is to find and return the number of sets of 3 positive integers a, b and c. that satisfy the following equation:

$$a^2+b^2+c^2+ab+bc+ca = N$$

Note: a, b and c ore positive integers, and their values can be the same.

MED

Input Specification:

input1: An integer value N

Output Specification:

Return an integer value, representing the number of sets of three positive integers that satisfy the equation given above.

Sample Input:

6

Sample Output:

Explanation:

The only pair (a,b,c) possible is (1,1,1)

Source Code:

n=int(input()) cnt=0 for a in range(1,int(n**0.5)+1): for b in range(1,int(n**0.5)+1): for c in range(1,int(n**0.5)+1): if (a*a)+(b*b)+(c*c)+(a*b)+(b*c)+(c*a)==n: cnt+=1 print(cnt)
